DIARY METHODS: Capturing Life as it is Lived

Niall Bolger, Angelina Davis, and Eshkol Rafaeli
Psychology Department, New York University, New York, New York 10003;
e-mail: niall.bolger@nyu.edu, aed232@nyu.edu, erm5@nyu.edu

Key Words experience sampling method, longitudinal designs, electronic data collection, self-report measures, multilevel models

■ **Abstract** In diary studies, people provide frequent reports on the events and experiences of their daily lives. These reports capture the particulars of experience in a way that is not possible using traditional designs. We review the types of research questions that diary methods are best equipped to answer, the main designs that can be used, current technology for obtaining diary reports, and appropriate data analysis

Individuals (across cultures) use technologies differently. Individuals (within cultures) have varying access to technology.

How can the technology be designed to consider these differences?

Individuals (across cultures) have varying attitudes to mental health. Individuals (within cultures) may need different kinds of care.

Will a smartphone support tool empower, or alienate?

**New interventions could save time and money.
New data changes how healthcare can
manage and provide care.**

**Will this data empower or burden health
services?**
